Professional Experience

current – Jan 2022 — **Mechatronics Design Engineer | Motion Planning and Controls , ASML, Wilton,Ct**

Currently I work to implement robotic (Controls, Machine learning, Kinematics, and Computer vision) software and functional changes onto a 6 dof precision robotic stage. This involves writing software in matlab, python and C++ for a 6dof robot. I then implement the function onto the fleet within a cross sectoral team.

- Used numerical optimization techniques to optimize pretension values for pull only actuators and to optimize controller parameters given frequency response data.
- Created a motion planning application that utilized multithreading to position the robotic stage into several desired positions .
- Lead the development of two new robotic tools that will enable automatic testing of electronics,hardware, and control methodologies of our new robot.
- Designed, developed, and tested a software algorithm in C++ and Matlab to keep motor coils warm while preventing movement of the robot in order to minimize thermal stresses due to bonding layers undergoing a phase transition.

C++ | robotics | controls | Data Analysis | Simulation | Pytorch | Tensor Flow | Matlab | Linear Algebra | Statistics | Machine Learning | Agile

Dec 2021 – May 2021 — **GRASP Lab | Graduate Student Researcher (Robotics) , University of Pennsylvania, Pennsylvania**

I used a phase change material coupled with a heated insert to create a latching mechanism to add directionality to an origami robot. I then designed and implemented a controller in C++ that ran on a micro controller in real time to control the mechanism .

- Designed and optimized a nonlinear controller using Matlab and Python
- Created a simulation and optimization of a mechanical Design of the latch insert using Python.
- Wrote a controller in C++ to control the latching mechanism.
- See DOI:10.1109/ICRA40945.2020.9196534 for more information on the robot.

C++ | Python | Controls | Rapid Prototyping | Git | Docker | Data Analysis | Robotics

May 2020 – December 2018 — **Fluid dynamic research | Student Researcher, Haverford College and University of Pennsylvania, Pennsylvania**

I worked in collaboration with University of Pennsylvania and Haverford College to investigate the way Non-Newtonian effects impacted lubrication forces within a fluid.

- Analyzed and tracked mechanics of a sphere moving through a fluid using OpenCV
- Programmed a testing instrument to collect force measurements of a probe being moved at a constant velocity through viscoelastic fluid

Matlab | OpenCV | Python | Solid Works | Java | Computational Physics | Computer Vision | Rapid Prototyping

May 2019 – December 2016 — **Digital Scholarship | Website designer, Haverford College, Pennsylvania**

I worked on https://archivogam.haverford.edu/en/, a website designed to connect persons illegally detained and forcibly disappeared in Guatemala during the Civil War with friends and relatives.

- Wrote the front and back end of Home and Images Section of Archivo Gam
- Implemented a panning zoom feature and a person search feature

Python | Linux | Django | git | command line | Docker

Education

December 2021 – January 2020 — **University of Pennsylvania | Mechatronics and Robotic Systems , (Masters of Science in Engineering), Philly,PA**

- Mechatronic and Robotics engineering master's student.

Robotics | Mechatronics | Controls | Machine Learning | Computer vision | Electrical design | Sensors

December 2020 – August 2016 — **Haverford College| Physics , B.S, Haverford,PA**

- Fluid dynamic research; Thesis : Touch Down of a Sphere in Viscoelastic Media

Physics | Math | Dynamics | Mechanics | Computational Physics | Coding | Problem Solving | Expirementation
